

SUMMARY

Computer Science student at Poornima Institute of Engineering and Technology. Hands-on experience in building web applications and backend systems. Good understanding of APIs, databases, and efficient data handling. Developed projects based on real-world use cases such as e-commerce and analytics systems. Familiar with Docker and CI/CD practices. Strong problem-solving ability with a focus on clean and maintainable code.

TECHNICAL SKILLS

- Programming Languages: Python, C, C++, JavaScript
- Web Development: HTML, CSS, React.js
- DevOps & Tools: Docker, Jenkins, CI/CD, Grafana, Kubernetes (Basics), Terraform (Basics), Helm (Basics)
- Cloud Platforms: AWS, Google Cloud
- Databases: MySQL
- APIs & Integration: REST APIs, JSON, HTTP Methods (GET, POST), API Integration
- Systems & Concepts: Linux, Networking Basics, Data Structures & Algorithms, Object-Oriented Programming

PROJECTS

1. Scalable Watch E-Commerce Platform (Full Stack + DevOps)

Technologies: HTML, CSS, JavaScript, Node.js, MySQL, Docker, CI/CD

 - Developed a full-stack e-commerce application with a responsive UI for browsing and purchasing watches.
 - Built backend services using Node.js with REST APIs for user authentication, product management, and order processing.
 - Integrated MySQL database and ensured efficient data storage and retrieval.
 - Applied Docker and CI/CD pipelines for automated build and deployment.
 - Designed the system with scalability in mind using load balancing and versioning concepts.
2. Smart Expense Tracker with Analytics (Backend + DevOps)

Technologies: Node.js, Express.js, MySQL, Docker, CI/CD

 - Developed a backend-driven expense tracking system to manage and categorize daily transactions.
 - Built REST APIs for user authentication, expense management, and data retrieval.
 - Designed MySQL database schema and implemented analytics to generate insights such as monthly and category-wise expenses.
 - Integrated Docker-based deployment workflow with CI/CD for continuous integration and delivery.
3. AI-Based Job Recommendation System (Backend + Data Processing)

Technologies: Python, Flask, MySQL, REST APIs

 - Developed a backend system to analyze user skills and recommend relevant job roles.
 - Built REST APIs using Flask to process user input and generate personalized recommendations.
 - Designed MySQL database to store user profiles, skills, and job data efficiently.
 - Implemented logic to match user skills with job requirements and rank results based on relevance.

INTERNSHIPS

1. Red Hat Linux Intern | System Administrator

Jun 2025 – Sept 2025

 - Managed user accounts, permissions, and system configurations in a Red Hat Enterprise Linux (RHEL) environment.
 - Automated administrative tasks using Bash and Python, reducing manual effort and improving efficiency.
 - Deployed and configured a secure webmail server using Postfix, Dovecot, and Roundcube.
2. Software Developer Intern | Mission Minded Foundation

Jul 2024 - Jul 2024

 - Developed responsive UI components using HTML, CSS, and JavaScript to enhance user experience.
 - Optimized application performance and usability by refining frontend features.
 - Collaborated with team members to implement requirements and improve overall user experience.

EDUCATION

Degree	Institution	Year	Score
B.Tech (Computer Science Engineering)	Poornima Institute of Engineering & Technology, Jaipur	Pursuing	CGPA: 8.2 / 10
Senior Secondary (XII)	SR. SEC. V.V.M. School, Todabhim	2022	82%
Secondary (X)	SR. SEC. V.V.M. School, Todabhim	2020	88%

CERTIFICATIONS

- Red Hat Certified System Administrator (RHCSA)
- 4x NPTEL: C, Python, OOP, Entrepreneurship
- DSA & DevOps Certification – ThirdEye Computer Classes
- AWS Cloud Practitioner (Udemy)
- Google Cloud Associate Engineer (Launchpad)
